fire detection

Nobel Fire Systems group has grown to combine interactive disciplines within the fire protection industry, enabling a truly holistic approach to the fire protection needs of any category of premises.

From conception the aim of Nobel Fire Systems has been to present our clients and customers with impartial, independent advice backed up with sound fire engineering knowledge based on over 50 years experience in the industry.

Drawing on our own manufacturing, design and installation expertise, coupled to that of our carefully chosen world leading complimentary associates we are able to offer a complete package of products and services to meet any environment demands.

Nobel Fire Detection encompasses all aspects of the requirements of BS 5839: 2002 to deliver complete supply & commission or the full package of design, supply installation, and commission. The ability to source and service and maintain all types of equipment gives Nobel Fire Detection a clear independent advantage.

fire suppression

To complete the portfolio, Nobel offers a full package of active fire suppression solutions. We manufacture the UK's leading restaurant fire protection systems, a preferred product of a number of leading UK insurers. Alongside our own range of manufactured systems we distribute other world leading products ensuring that a truly impartial and independent approach can be made based on comprehensive risk based analysis.

Nobel Fire Systems takes into account the environmental, economic and long term ownership of a system as part of our standard approach to customer care.
